

The readout knows when it doesn't know — the Δ profile margin as an uncertainty signal

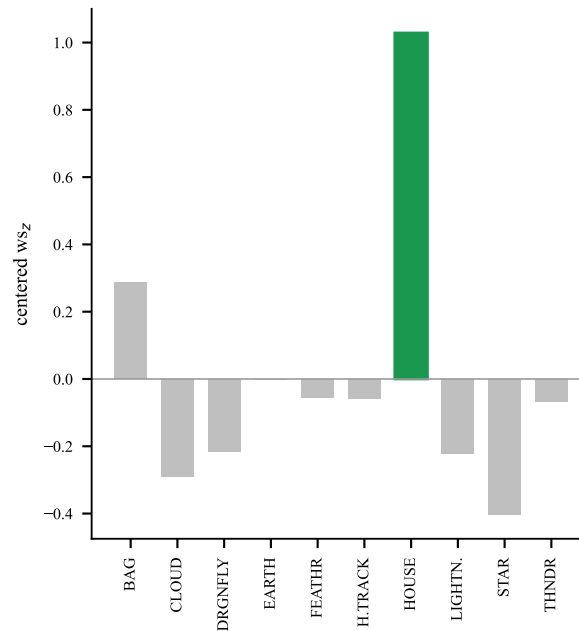

(A) The margin separates hits from misses (AUC 0.78); ambiguous phrases land with the misses

(B) Selective answering — abstaining on low-margin probes raises accuracy

(C1) high margin, correct (margin 0.74)
“inside the warm ring of lodges everyone was lo ...”
intended HOUSE

(C2) low margin, miss (margin 0.04)
“the four ways meet at a center where a person ...”
intended STAR — read as BAG
