

Inside the Δ context kernel — removing one global mode turns an artifact into a content-bearing similarity

(A) Raw Δ kernel — one mode (82% of variance) tracks overall activation strength ($r = 0.84$); kit-independent (cross-kit $r = 0.93$)

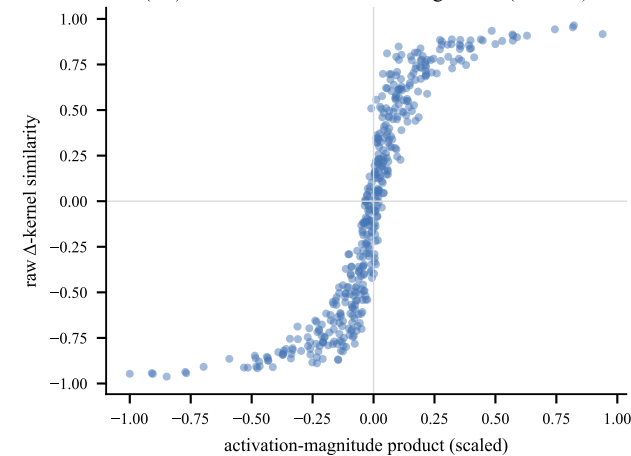

the smallest beings endure hardships that w.
everything that grows draws what it needs f.
the whole web of green and growing things d.
the old women decided who ate first and saw.
she gathered everything the family would ne.
the elders marked his great deeds before th.
to ride straight at the enemy and touch him.
the more he gave away, the greater his name.
a fine gift of many fast mounts sealed the...
inside the warm ring of lodges everyone was.
the healer kept her remedies close, ready t.
the elders gathered to talk through the tra.
those who came from far beyond the world wa.

from the high pass the land opened out wide.
the noise shook our chests and reminded us...
the old ones were drawing near, heralded by.
in the thick drifting haze the door between.
a deep rolling boom crossed the valley and...
a tiny iridescent flier hovered at the wate.
its delicate wings flickered, a brief gentl.
the same bright dust that made the first ni.
a gray ceiling gathered overhead and the fi.
the angry sky-god could strike a man dead w.
a sudden white flash split the dark and the.
what came rolling in was terrible and bright.

(B) After removing that single mode ("all-but-the-top"):
coherent registers emerge, readable off the sentences themselves
(no labels used — rows ordered by the kernel's own clustering)

(C1) The raw kernel measures magnitude ($r = 0.84$)

(C2) The cleaned kernel measures content ($r = 0.69$)
